Please note the Florida Wildlife Federation's strong opposition to the construction of a proposed gas station on top of the karstic underground water system that feeds Wakulla Springs. Wakulla Springs in an internationally recognized ecological jewel that drives the economy of the County as well a unique symbol of the natural beauty of this area. The Springs' once crystal-clear water has been subjected to pollution from development and run-off, and many public dollars have been spent to restore water quality. To allow the placement of a gas station on top of the Springs' waters, with the inherent threat of spills and leaks of gasoline into the aquifer, does not seem a wise action.

Please act to save the Springs for ourselves and future residents and disallow this construction. Gas stations can be built, but not where they can cause harm.

Thank you for your consideration.
